

# Project report

## Product

Ceramic stove tops

## Task

Packaging development and packaging optimisation for ceramic stove tops

## Initial situation

In the course of amalgamation of production locations the existing packaging should be optimised and standardised. For the ceramic stove tops existed 14 different side plates of EPS (expanded polystyrene) and 17 layouts of corrugate board.

## Solution

Reduction of the 14 different side plates of EPS up to 2 and optimisation of the corrugate board boxes regarding costs and handling.

## Result

- Significant reduction of packaging costs caused by a higher annual need
- Reduction of claims (Optimisation of damping)
- Reduction of set-up costs
