

# Project report

## Product

Halogen lamp

## Task

Packaging development and packaging optimisation for halogen lamps including re-engineering of the packing line.

## Initial situation

The lamp is packed in a pillow pack. That followed the pillow pack is diagonally insert in a folded box with tuck end. The hole packing process happens manual.

## Solution

The pillow pack is integrated in the folded box. This modification allows a fully automatic packing with only a few modifications on the existing cartoning line.

## Result

- Automation of the hole packing process
- Use of the existing cartoning machine
- Reduction of packing costs
