

Project report

Product

Reflector lamps

Task

Packaging optimisation and projection of a fully automatic packing line

Initial situation

The blister packing were standing in corrugate fibreboard boxes in single-rows or two-rows. The hole packing process happened manually.

Solution

A constructive modification of the blister packing enables to leave out the inlay. Afterwards a fully automatic blister packing machine and a stacker was planned and projected.

Result

- Reduction of material costs
- Reduction of the costs for the packing process
